

List Price: \$1599.99

Dragon® Medical is the most widely used speech recognition software program and offers up to 99% accuracy. Dragon Medical 10 includes medical vocabularies covering more than 75 medical specialties and subspecialties. Dragon Medical 10 is 20% more accurate than Dragon NaturallySpeaking Medical 9—and over 38% more accurate than Dragon Professional 10 when used in clinical settings.

Using Dragon Medical 10, physicians can dictate into their EMR software, patient notes or word processing program of their choice—in their own words. As 30 percent of U.S. physicians are born outside the United States, Dragon Medical 10 now calibrates to regional accents through an initial voice screening process. The software automatically adapts to a variety of U.S., Southeast Asian, Indian and Hispanic accents.

Dragon Medical 10 raises quality of care for patients while improving financial performance. Enabling clinicians to dictate, review and sign medical records in one step, Dragon Medical supports communicating clinical information to referring clinicians and patients *faster than ever before*.

#### **DRAGON MEDICAL 10 IMPROVES QUALITY OF PATIENT CARE!**

Dragon Medical 10 allows the physician to focus on the narrative—the most important part of a patient note. A medical record including a dictated physician narrative promotes higher quality care with complete, “patient specific” information for every patient encounter. With Dragon Medical 10, physicians can complete critical patient documentation and make it immediately available for other care providers to access electronically.

#### **DRAGON MEDICAL 10 IMPROVES FINANCIAL PERFORMANCE OF CLINIC!**

Dragon Medical 10 improves financial performance by drastically reducing or eliminating transcription costs and by increasing physician productivity compared to typing or “point and click” and “drop down menu” data entry into an EMR. Clinicians can now spend more time with patients or increase their patient load—leading to higher practice revenue.

#### **DRAGON MEDICAL 10 IS NETWORK READY AND EMR COMPATIBLE!**

Dragon Medical 10 enables healthcare practitioners to dictate directly into an EMR system. Dragon Medical supports clinicians as they edit and sign medical reports. Dragon Medical is available for integration with any Windows®- or Citrix®-based EMR systems, including, but not limited to, those from Allscripts MyWay™, Epic, GE® Healthcare, NextGen®, Siemens, eClinicalWorks®, Meditech, McKesson®, Cerner and Eclipsys.
